2008 This book offers a comprehensive look at an industry that plays a growing role in motor vehicle production in the United States.

The Turnaround Experience Frederick Zimmerman 2011-08-05 The Turnaround Experience is a study of 16 attempted business turnarounds, each studied for twenty years. Nine were successful and seven unsuccessful, the differences owing to the strategies employed, the managerial skills, and character traits on the part of the people involved. The proposition advanced here is that the successful turnarounds focuses involved conscientious, carefully orchestrated efforts aimed at improving the firm's effectiveness as an efficient low-cost producer of increasingly differentiated quality products simultaneously. This study also revealed that successful turnarounds

involve leaders who focus on operations, possess strong ethical values, have good personal reputations, and follow the principles of fair play in dealing with employees, creditors, suppliers, and customers. The 16 cases were drawn from actual documented histories occurrences spanning more than 80 years from 1902 to 1988 in the automobile and agricultural equipment industries where much material is available on the events and the characteristics of the people involved.

Increased Automobile Fuel Efficiency and Synthetic Fuels

Space Systems Failures David M. Harland
2007-09-14 The very first book on space systems failures written from an engineering perspective. Focuses on the causes of the failures and discusses how the engineering knowledge base has been enhanced by the lessons learned. Discusses non-fatal anomalies which do not affect the ultimate

success of a mission, but which are failures nevertheless. Describes engineering aspects of the spacecraft, making this a valuable complementary reference work to conventional engineering texts.

Serine Proteases Isamu Chiba 2012
Proteases refer to a group of enzymes whose catalytic function is to hydrolyze (cleavage) peptide bonds of proteins. Proteases occur naturally in all organisms and are involved in a multitude of physiological reactions from simple digestion of food proteins to highly regulated cascades. In this book, the authors discuss the maturation and stabilization mechanisms of two hyperthermostable subtilisin-like serine proteases from *Thermococcus kodakarensis*; serine protease-related innate immunity; fungal and bacterial serine proteases; and

the physiological function and pathology of neurosin/kallikrein 6 in the central nervous system.

How to Tune and Modify Engine

Management Systems Jeff Hartman

2004-02-13 Drawing on a wealth of knowledge and experience and a background of more than 1,000 magazine articles on the subject, engine control expert Jeff Hartman explains everything from the basics of engine management to the building of complicated project cars. Hartman has substantially updated the material from his 1993 MBI book *Fuel Injection* (0-879387-43-2) to address the incredible developments in automotive fuel injection technology from the past decade, including the multitude of import cars that are the subject of so much hot rodding today. Hartman's text is extremely detailed and logically arranged to help readers better understand this complex topic.

Close Combat Mission Capability Kit
Department of the Army 2014-05-01
Purpose of Equipment: The CCMCK Weapon Conversion System allows Force-On-Force close combat training by temporarily converting service weapons (M16A2/M16A3/M16A4 Rifles, M4/M4A1 Carbines, M249 Squad Automatic Weapons (SAW), and M9 and M11 Pistols) to fire low-velocity marking ammunition. CCMCK ammunition includes 5.56mm Bulk marking ammunition for the M16A2/M16A3/M16A4

Rifle and M4/M4A1 Carbine, 5.56mm Linked marking ammunition for the M249 SAW, and 9mm marking ammunition for the M9 and M11 Pistols. Marking ammunition, manufactured in red, blue, and yellow, is loaded into the magazine of the converted weapon in the same manner as service ammunition. Once loaded, the weapon cycles and functions the same as service ammunition and marks the target with minimal hazard to personnel wearing appropriate safety equipment. The system allows normal weapon employment cues such as aiming, firing, Force-On-Force training, and interactive live-fire scenario task and mission execution.

The High-Velocity Edge: How Market Leaders Leverage Operational Excellence to Beat the Competition

Steven Spear 2010-05-07 Generate Better, Faster Results— Using Less Capital and

Fewer Resources! “[The High-Velocity Edge] contains ideas that form the basis for structured continuous learning and improvement in every aspect of our lives. While this book is tailored to business leaders, it should be read by high school seniors, college students, and those already in the workforce. With the broad societal application of these ideas, we can achieve levels of accomplishment not even imagined by most people.” The Honorable Paul H. O’Neill, former CEO and Chairman, Alcoa, and Former Secretary of the Treasury “Some firms outperform competitors in many ways at once—cost, speed, innovation, service. How? Steve Spear opened my eyes to the secret of systemizing innovation: taking it from the occasional, unpredictable ‘stroke of genius’ to something you and your people do month-in, month-out to outdistance rivals.” Scott D. Cook, founder and Chairman of the

Executive Committee, Intuit, Inc. “Steven Spear connects a deep study of systems with practical management insights and does it better than any organizational scholar I know. [This] is a profoundly important book that will challenge and inspire executives in all industries to think more clearly about the technical and social foundations of organizational excellence.” Donald M. Berwick, M.D., M.P.P., President and CEO, Institute for Healthcare Improvement About the Book How can some companies perform so well that their industry counterparts are competitors in name only? Although they operate in the same industry, serve the same market, and even use the same suppliers, these extraordinary, high-velocity organizations consistently outperform all the competition—and, more importantly, continually widen their leads. In *The High-Velocity Edge*, the reissued edition of five-

time Shingo Prize winner Steven J. Spear’s critically acclaimed book *Chasing the Rabbit*, Spear describes what sets market-dominating companies apart and provides a detailed framework you can leverage to surge to the lead in your own industry. Spear examines the internal operations of dominant organizations across a wide spectrum of industries, from technology to design and from manufacturing to health care. While he investigates several great operational triumphs, like top-tier teaching hospitals’ fantastic improvements in quality of care, Pratt & Whitney’s competitive gains in jet engine design, and the U.S. Navy’s breakthroughs in inventing and applying nuclear propulsion, *The High-Velocity Edge* is not just about the adoration of success. It also takes a critical look at some of the operational missteps that have humbled even the most reputable and respected of companies and organizations. The decades-

long prominence of Toyota, for example, is contrasted with the many factors leading to the automaker's sweeping 2010 product recalls. Taken together, these multiple perspectives and in-depth case studies show how to: Build a system of "dynamic discovery" designed to reveal operational problems and weaknesses as they arise Attack and solve problems when and where they occur, converting weaknesses into strengths Disseminate knowledge gained from solving local problems throughout the company as a whole Create managers invested in developing everyone's capacity to continually innovate and improve Whatever kind of company you operate—from technology to finance to healthcare—mastery of these four key capabilities will put you on the fast track to operational excellence, where you will generate faster, better results—using less capital and fewer resources. Apply the lessons of Steven J.

Spear and gain a high-velocity edge over every competitor in your industry.

Modern Electric, Hybrid Electric, and Fuel Cell Vehicles, Third Edition

Mehrdad Ehsani 2018-02-02 The book deals with the fundamentals, theoretical bases, and design methodologies of conventional internal combustion engine (ICE) vehicles, electric vehicles (EVs), hybrid electric vehicles (HEVs), and fuel cell vehicles (FCVs). The design methodology is described in mathematical terms, step-by-step, and the topics are approached from the overall drive train system, not just individual components. Furthermore, in explaining the design methodology of each drive train, design examples are presented with simulation results.

Automotive Engines: Theory and Servicing, 5/e (With CD) Halderman 2005

Advancements in Electric Machines J. F. Gieras 2008-11-14 Traditionally, electrical machines are classified into d. c. commutator (brushed) machines, induction (asynchronous) machines and synchronous machines. These three types of electrical machines are still regarded in many academic curricula as fundamental types, despite that d. c. brushed machines (except small machines) have been gradually abandoned and PM brushless machines (PMBM) and switched reluctance machines (SRM) have been in mass production and use for at least two decades. Recently, new topologies of high torque density motors, high speed motors, integrated motor drives and special motors have been developed. Progress in electric machines technology is stimulated by new materials, new areas of applications, impact of power electronics, need for energy saving and new technological challenges. The development

of electric machines in the next few years will mostly be stimulated by computer hardware, residential and public applications and transportation systems (land, sea and air). At many Universities teaching and research strategy oriented towards electrical machinery is not up to date and has not been changed in some countries almost since the end of the WWII. In spite of many excellent academic research achievements, the academia-industry collaboration and technology transfer are underestimated or, quite often, neglected. Underestimation of the role of industry, unfamiliarity with new trends and restraint from technology transfer results, with time, in lack of external financial support and decline in the number of students interested in Power Electrical Engineering.

Veteran Motor Cars Michael E. Ware
2008-03-04 Veteran cars are those made not later than 1918 and were thus the earliest motor cars to appear on the roads of Britain. The first models basically comprised the frame and bodywork of a horse-drawn carriage fitted with a petrol engine, but during the period up to the First World War they became much more comfortable and efficient vehicles. This book describes how the motor car developed from its unpromising origins in the 1880s and 1890s, when motoring was mainly a hobby for wealthy eccentrics, until it came to be seen as a serious means of transport. About the author Michael Ware is the retired Director of the National Motor Museum at Beaulieu. In 1959 he formed his own photographic business specialising in motor-racing photography. The veteran and Edwardian

periods of motoring are his favourites and he greatly enjoys driving cars of this era. Another title for Shire by this author: Canals and Waterways
